

Senior Front-End Engineer with 8+ years building high-traffic React and TypeScript applications used by millions, including real-money betting interfaces at theScore and ESPN BET, alongside products I have shipped solo end-to-end. Earlier, at Fidelis CyberSecurity, I worked full-stack across Angular, Node, and Java. I own features start to finish with a focus on performance, accessibility, and UX, and I work AI-natively, having led Claude Code adoption on my team.

EXPERIENCE

Penn Entertainment

Senior Frontend Software Engineer

TheScore, TheScore Bet, and ESPN BET

Mar 2022 – May 2026

- Revamped TheScore website, migrating from legacy technology to React and reworking sport score pages for a cleaner UX.
- Led skill development and adoption of Claude Code across theScore Media web team.
- **Search:** Led front-end architecture and rollout; improved discoverability of events and players (70% of searches lead to clickthrough).
- **MyBets redesign:** Reworked information hierarchy, improved readability, and cut page clutter for greater clarity.
- **Live Streaming:** Partnered with 3rd-party video stream providers to develop MVP and V2 products.
- **Golf Event Center / Parlay Lounge / Featured Bets:** Delivered iterative MVP → GA via A/B tests.
- **Bet Sharing:** Took the bet-share flow from concept to ship.
- **Reliability & Leadership:** Ran web on-call (scheduling and runbooks), mentored interns, co-ops, and junior/mid engineers, interviewed candidates, acted as backup scrum master, and streamlined engineering all-hands to be outcomes-focused.

Fidelis CyberSecurity

Software Engineer II (Fullstack)

Dec 2018 – Mar 2022

- Built end-to-end UI workflows for threat analysis; introduced reusable components and unit tests to reduce regressions in critical views.
- Drove UX polish with researchers and back-end teams; improved time-to-insight for analysts.

American Bankers Association

Junior Web Developer

Nov 2017 – Oct 2018

- Shipped and maintained member-facing pages and internal tools; improved release hygiene and version-control practices.

PROJECTS

On The Clock

Fantasy football draft assistant (React 19, TypeScript, Vite). Live product with multi-source ADP data blending; built and shipped solo, end-to-end.

kendalladkins.dev/projects/on-the-clock

Loresmith

Local-first D&D session-notes app; validated demand with real users before building, and documented the architecture decisions and a product pivot.

kendalladkins.dev/projects/loresmith

Valorant Vantage

Next.js app with rank tracking and a "Fight Map" performance heatmap; shipped end-to-end.

kendalladkins.dev/projects/vantage

Writing — How I Actually Work With AI

An essay on AI-assisted engineering as a collaborator, not a crutch.
